Applying Filters to SQL Queries

Project description

I'm acting as a security professional for a large organization. Part of my job is to investigate security issues to help keep the system secure. I recently discovered some potential security issues that involve login attempts and employee machines.

My task was to examine the organization's data in their **employees** and **log_in_attempts** tables. I needed to use SQL filters to retrieve records from different datasets and investigate the potential security issues.

Retrieving after hours failed login attempts

I discovered a potential security incident that occurred after business hours. To investigate further, I queried the **log_in_attempts** table to identify all failed login attempts that occurred after 18:00:

```
MariaDB [organization]> select*
    -> from log_in_attempts
    -> where success = 0 and login_time > '18:00';
+----------+----------+------------+------------+---------+-----------------+---------+
| event_id | username | login_date | login_time | country | ip_address      | success |
+----------+----------+------------+------------+---------+-----------------+---------+
|        2 | apatel   | 2022-05-10 | 20:27:27   | CAN     | 192.168.205.12  |       0 |
|       18 | pwashing | 2022-05-11 | 19:28:50   | US      | 192.168.66.142  |       0 |
|       20 | tshah    | 2022-05-12 | 18:56:36   | MEXICO  | 192.168.109.50  |       0 |
|       28 | aestrada | 2022-05-09 | 19:28:12   | MEXICO  | 192.168.27.57   |       0 |
|       34 | drosas   | 2022-05-11 | 21:02:04   | US      | 192.168.45.93   |       0 |
|       42 | cgriffin | 2022-05-09 | 23:04:05   | US      | 192.168.4.157   |       0 |
|       52 | cjackson | 2022-05-10 | 22:07:07   | CAN     | 192.168.58.57   |       0 |
```

Retrieving login attempts for specific dates

A suspicious event occurred on 2022-05-09. To investigate this event, I wanted to review all login attempts which occurred on this day and the day before. I used filters in SQL to create a query that identified all login attempts that occurred on 5/08 and 5/09:

```
MariaDB [organization]> select*
    -> from log_in_attempts
    -> where login_date = '2022-05-09' and '2022-05-08';
+----------+----------+------------+------------+---------+-----------------+---------+
| event_id | username | login_date | login_time | country | ip_address      | success |
+----------+----------+------------+------------+---------+-----------------+---------+
|        1 | jrafael  | 2022-05-09 | 04:56:27   | CAN     | 192.168.243.140 |       1 |
|        3 | dkot     | 2022-05-09 | 06:47:41   | USA     | 192.168.151.162 |       1 |
|       15 | lyamamot | 2022-05-09 | 17:17:26   | USA     | 192.168.183.51  |       0 |
|       24 | arusso   | 2022-05-09 | 06:49:39   | MEXICO  | 192.168.171.192 |       1 |
|       25 | sbaelish | 2022-05-09 | 07:04:02   | US      | 192.168.33.137  |       1 |
|       28 | aestrada | 2022-05-09 | 19:28:12   | MEXICO  | 192.168.27.57   |       0 |
|       30 | yappiah  | 2022-05-09 | 03:22:22   | MEX     | 192.168.124.48  |       1 |

```

Retrieving all login attempts outside of Mexico

The team determined that this suspicious activity didn't originate in Mexico, so I needed to investigate all login attempts that occurred outside of Mexico:

```
MariaDB [organization]> select*
    -> from log_in_attempts
    -> where not country like 'Mex%';
+----------+----------+------------+------------+---------+-----------------+---------+
| event_id | username | login_date | login_time | country | ip_address      | success |
+----------+----------+------------+------------+---------+-----------------+---------+
|        1 | jrafael  | 2022-05-09 | 04:56:27   | CAN     | 192.168.243.140 |       1 |
|        2 | apatel   | 2022-05-10 | 20:27:27   | CAN     | 192.168.205.12  |       0 |
|        3 | dkot     | 2022-05-09 | 06:47:41   | USA     | 192.168.151.162 |       1 |
|        4 | dkot     | 2022-05-08 | 02:00:39   | USA     | 192.168.178.71  |       0 |

```

Retrieving employees in Marketing

The team wanted to perform security updates on specific employee machines in the Marketing department. I was responsible for getting the information on these employee machines, so I used SQL filters to create a query that identified all employees in the Marketing department across all offices in the Eastern headquarters:

```
MariaDB [organization]> select*
    -> from employees
    -> where office like 'EAST%' and department = 'Marketing';
+-------------+-------------+----------+------------+----------+
| employee_id | device_id   | username | department | office   |
+-------------+-------------+----------+------------+----------+
|        1000 | a320b137c219 | elarson  | Marketing  | East-170 |
|        1052 | a192b174c940 | jdarosa  | Marketing  | East-195 |
|        1075 | x573y883z772 | fbautist | Marketing  | East-267 |
|        1088 | k8651965m233 | rgosh    | Marketing  | East-157 |
|        1103 | NULL         | randerss | Marketing  | East-460 |
|        1156 | a184b775c707 | dellery  | Marketing  | East-417 |
|        1163 | h679i515j339 | cwilliam | Marketing  | East-216 |
+-------------+-------------+----------+------------+----------+
7 rows in set (0.002 sec)
```

Retrieving employees in Finance and Sales

Next, the team needed to perform a different security update on machines for employees in the Sales and Finance departments, so I used SQL filters to query the **employees** table and gather all pertinent employee information:

```
MariaDB [organization]> select*
    -> from employees
    -> where department = 'sales' or department = 'finance';
+-------------+-------------+----------+------------+-------------+
| employee_id | device_id   | username | department | office      |
+-------------+-------------+----------+------------+-------------+
|        1003 | d394e816f943 | sgilmore | Finance    | South-153   |
|        1007 | h174i497j413 | wjaffrey | Finance    | North-406   |
|        1008 | i858j583k571 | abernard | Finance    | South-170   |
|        1009 | NULL         | lrodriqu | Sales      | South-134   |
|        1010 | k2421212m542 | jlansky  | Finance    | South-109   |
```

Retrieving all employees not in IT

Lastly, my team needed to make one more update to employee machines. The employees in the IT department already had this update, but employees in all other departments needed it, so I used filters to create a query to pull all employees **not** in the IT department:

```
MariaDB [organization]> select*
    -> from employees
    -> where not department = 'Information Technology';
+-------------+--------------+----------+-----------------+-------------+
| employee_id | device_id    | username | department      | office      |
+-------------+--------------+----------+-----------------+-------------+
|        1000 | a320b137c219 | elarson  | Marketing       | East-170    |
|        1001 | b239c825d303 | bmoreno  | Marketing       | Central-276 |
|        1002 | c116d593e558 | tshah    | Human Resources | North-434   |
|        1003 | d394e816f943 | sgilmore | Finance         | South-153   |
|        1004 | e218f877g788 | eraab    | Human Resources | South-127   |
```
